**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 18-23, drawn to toxic substance containment and test system, classified in class 119, subclass 420.
- II. Claims 12-13, drawn to a patch for transdermal testing of toxic substances on an animal subject, classified in class 424, subclass 443.
- III. Claims 14-17, drawn to method for testing and containment of toxic substances, classified in class 119, subclass 417.

Inventions III and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process can be performed by an entirely different patch design i.e. a patch that does not require a cover or multiple layers or can be performed merely by a band-aid laced with a toxic substance. Also, the apparatus as claimed can be used to perform an entirely different process since it does not require a containment compartment, a filter, ion neutralizer, etc. The apparatus can be placed on an animal to remove a fungus.

Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as

claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus can be used to practice another and materially different process such as chamber to put an animal to sleep or a chamber containing an animal for monitoring after it received a particular injection or exposure to gases.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention I does not require a test patch. The subcombination has separate utility such as for removal of fungus or wart from a finger or a means of birth control or to discourage smoking.

Because these inventions are distinct for the reasons given above and the search required for Group III and II is not required for Group I and the search required for Group III is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
